

## Photoluminescent Light Box

Using photoluminescent light, the Light Box enables evacuation plans, safety, warning and hazard symbols and messages to be read in emergency situations when the power has failed or battery backups run out.

The Safety Path Light Box does not use electricity or batteries and is carbon emission free. The frame of the Light Box snaps open enabling you to quickly and cheaply update the message as required.

### Environmentally Safe & Sustainable

NO Electricity required.  
NO Battery required.  
No emissions.  
Photoluminescence recharged from existing room light or daylight.

### Simple & Effective

Opening frame enables quick and cheap changes to its content. Spring-loaded frame snaps open so you can change your signs & messages.

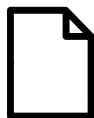

### Safety in Emergencies

Emergency evacuation plans and safety messages can be seen in darkness. Safety messages and symbols can be seen in blackout conditions.

### Adaptable

Emergency plans, safety information and safety symbols can be printed and displayed within the light box.

Available in sizes A3 or A4 sheets

Variety of potential applications

Easily switch over plans & information
